## **DETAILED ACTION**

### ***Election/Restrictions***

1. This Application contains claims directed to the following patentably distinct species:
  - I. Claims 1 - 8, drawn to transforming data (i.e., data conversion), classified in class 341, subclass 50+.
  - II. Claims 9 - 12, drawn to accessing plug-in programs (i.e. inter-program communication), classified in class 719, subclasses 311 and 312.
  - III. Claims 13 - 22, drawn to display control (i.e., displaying a reproduction tool), classified in class 345, subclass 619.
  - IV. Claims 23 - 26, drawn to synchronization of diverse content, classified in class 715, subclass 500.1.
  - V. Claim 27 - 32, drawn to data filtering, classified in class 708, subclass 300.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II – V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as code conversion or transformation apparatus, not using the

Art Unit: 2837

specific inter-program communication of II, the display control of III, the data synchronization of IV, or the data filtering of V. Subcombination II has separate utility such as a inter-program communication apparatus not using the data transformation of I, the display control of III, the data synchronization of IV, or the data filtering of V.

Subcombination III has separate utility such as a display control not using the data transformation of I, the inter-program communication of II, the data synchronization of IV, or the data filtering of V. Subcombination IV has separate utility such as a data synchronization apparatus, not using the specific data transformation of I, inter-program communication of II, the display control of III, or the data filtering of V. Subcombination V has separate utility such as a data synchronization apparatus, not using the specific data transformation of I, inter-program communication of II, the display control of III, or the data synchronization of IV. See MPEP § 806.05(d).

3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

5. The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

6. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
